## Tango Beam for Tango Kit

For the 2,20m version of the Tango Kit (combination of the 1m and 1,20m Tango track) Prosup makes the Tango Beam in order to work with the Tango Roller upside down.

This so called underslung mode allows you to tilt 90° downwards without seeing the tripod legs /slider supports as the camera is supported from the top.

With the Prosup solution underslinging is easily achieved as the Tango Beam folds in transport. Once folded open it is spanned between 2 heavy duty light stands and thus it can be raised to the desired height. To invert again the hanging camera, Prosup offers the Underslinging bracket.
