professional camera support

[www.prosup.com](http://www.prosup.com)

Wherever you use your camera in an undersling mode – on the inverted Tango Roller sliding below the Tango Beam as well as on the reversed EJib bowl – the Prosup Undersling bracket puts back your camera into an upward position. The Undersling is mounted onto the camera plate of the inverted fluid head and can be adjusted in both axes. With the Undersling lowermost camera positions are possible.
