The Ejib arm is an ergonomic jib, constructed of high grade Aluminium which has been hard anodised for strength and integrity.

Within a minute the Ejib folds down to minimum size and it is reassembled in the same time.

Therefore it is ideal for traveling, difficult locations and one man operation.

The Ejib in its pelicase weighs in at 18 kg. The counterweight spindle is made to use standard weights with a diameter of 30mm.

They can be fine-tuned on the spindle thus perfectly balancing the jib arm.

It can be assembled in both standard and underslung configuration for optimal camera positions.

The Jib-arm folds down till 72 cm. and weighs no more than 11 kg.

The Ejib's front and rear ends can be adjusted towards the pivot point and thus making the unit easy to operate.

Assembled in both over- and undersling configurations for optimum camera positions.

The Ejib carries camera loads of 15kg and works best on a 100mm tripod.
